# Q10 SUPER PENETRATING RUST SOLVENT

## IDEAL USAGE:

## PRODUCT INFORMATION

Any mechanical device containing fixings such as nuts and bolts can be prone to the effects of rust and grime - These corrosive substances can cause seizures which often result in time consuming costly repairs and part replacements. Q10 is a fast acting penetrating oil that ensures smooth running machinery and prevention of further corrosion. Q10 breaks down rust and removes grease, dust, dirt and sludge. It is an essential tool for garages and workshops - suitable for use on gauges, instruments, locks, and power tools and can aid maintenance of plumbing and pipework. Q10 is silicone free and is safe to use on paint work.

As with all our aerosols it has the 360° valve to enable the can to be used upside down to stop just the gas coming out and the can being left with product in at the end of the life of it. It gives peace of mind that if you press the button on top, product is released, even when you cannot see the can in a tight spot.

This product is fully REACH compliant and is manufactured in the UK.

## TESTIMONIALS

L200 Van - Fan belt adjuster nut seized solid. Tried 2 foot breaker bar and socket, would not budge. Applied Q10 penetrant and left to soak for 5minutes. Attached small ratchet and socket and released the nut very easily. Was very surprised how fantastic Q10 worked. Incredible! **John Dougherty Autocentre Manager Halifax**

After using the Q10 now for a few days, I am and my colleagues are of the opinion that it is the best penetrating oil we have ever used. It does do what it says in your sales literature, it breaks down rust and grime quickly to free up threads on nuts and bolts. The environment which we work in is very harsh in the offshore industry so the plant and machinery are greatly affected by the weather, giving us problems with corrosion. We have tested Q10 on some High Pressure Gas Flanges where very high tightening torques are involved. After spraying the bolts with it, they literally turned off by hand after the torque tightening tool had cracked them off with the hydraulic pressure. I can't speak highly enough of your product, suffice to say I am telling all the Maintenance Superintendents to order us some up as soon as they can. Will distribute your leaflets to all. One of the lads changed his Anti-roll bars on his BMW X5 last night in the Nigg shipyard, he couldn't believe how easy they came off after he sprayed them with Q10.! **Barry Whittaker Bluewater-offshore**
