

**Hardwood cuttings:**

Dip into water and shake off excess before dipping into powder. Plant at once.

**Young Transplants:**

Sprinkle the powder sparingly into the planting hole prior to re-potting young plants.

Gently tap down the soil or coir medium around the cutting to remove air pockets. Keep cuttings moist but not over watered.

**Helpful advice:**

WASH HANDS AFTER USE.

Keep away from children, pets and foodstuffs. Always replace the lid and store in a dry place.

# Natural Rooting Powder

For all edible  
& ornamental  
cuttings

75g e

Natural Rooting Powder containing a natural source of seaweed to dramatically increase the propagation of both edible and ornamental plants.

Use on a variety of both indoor and outdoor cuttings, including new growth, brittle stems, woody stems, grafting, young plants, corms and bulbs.

Also use for dipping plugs. Use all year round.

**DIRECTIONS FOR USE**

Cut straight across below a leaf joint or bud. Remove leaves from the lower third of the cutting. Stand cuttings in water after preparation. Shake off excess water then dip prepared cutting 25mm (1") into powder, shake off excess, plant at once into a hole in the growing media or propagation plug.
